

## **Puppy Checklist**

\*No collars in crates as they can get caught or snagged.

\*No public places (pet stores, dog parks, etc.) until fully vaccinated.

\*Continue vaccines every 2-3 weeks, depending on your vet's recommendation, until they are 16 weeks old.

\*Crying/first time away from litter. What to expect. Please refer to the sheet labeled "Why does your lonely puppy cry?".

\*Maximum amount of time in crate, tiny bladders, and how long they can hold their bladders. Please refer to "Potting Training".

\*Baths after surgery (spay and neuters). Their incisions are just starting to heal, and we don't want any scabbing to soften or come off. This will cause the incision to open and become infected. They can be bathed quickly by pouring water over the top of them while leaving the drain open. We do not want the incision submerged in water.
